US Regime Change in Venezuela Benefits Zionist Neocon and Props Up US Dollar

The Economic Drivers of Regime Change

While many observers justify United States intervention in Venezuela under the assumption that the average American will benefit from access to foreign oil, recent investigations suggest a different motivation. Attorney Baron Coleman has analyzed the recent military coup, indicating that the primary objective was to sustain the global standing of the U.S. dollar rather than provide broad economic relief to the American public.

For the past five decades, the value of the U.S. dollar has been fundamentally linked to the oil trade. Following the transition away from the gold standard, the "petrodollar" system was established, creating an artificial global demand for American currency. The movement to remove the Maduro administration was largely driven by Venezuela's efforts to bypass this system. By establishing direct payment channels to China for oil, Venezuela threatened to circumvent the U.S. dollar, prompting a strategic military response from the United States.

The Sale of PDV Holdings and Citgo

The financial restructuring following the regime change involves the sale of PDV Holdings, the parent company of Citgo. These assets are being acquired by Amber Energy, a firm owned by Elliott Investment Management.

Elliott Investment Management is a hedge fund led by Paul Singer, who serves as the company's founder, president, and co-CEO. Singer, described as a Zionist neocon billionaire, is positioned to profit significantly from this transition of Venezuelan assets.

Political Influence and Strategic Funding

The acquisition of Venezuelan energy assets highlights the deep ties between private financial interests and U.S. foreign policy. Paul Singer has a long history of significant political contributions and strategic funding, including:

- Political Donations: In 2016, Singer provided seven-figure donations to the presidential campaign of Marco Rubio, who currently serves as the Secretary of State.
- Intelligence and Technology: Singer has funded the outsourcing of American technology jobs to Israel and facilitated the integration of the Israeli military and intelligentsia into the U.S. technology sector.
- Political Research: In 2020, Singer was involved in funding the Steele dossier, a controversial document used in political maneuvers against Donald Trump.
- Organizational Support: His financial influence extends to various Zionist Christian organizations.

In summary, the regime change in Venezuela serves a dual purpose: it protects the petrodollar by preventing independent trade routes between Venezuela and China, and it facilitates the transfer of valuable energy infrastructure to specific private interests with high-level political connections.

Analogy for Understanding the Petrodollar

Think of the U.S. dollar like a specific type of token required to enter a world-class stadium. As long as every vendor inside the stadium—from the snack bar to the jersey shop—refuses to take anything but those tokens, everyone who wants to be part of the game must buy them. If a major vendor suddenly decides to start accepting other forms of payment, the demand for those tokens drops, and the stadium's exclusive economy begins to lose its power. The intervention in Venezuela was essentially an effort to ensure that the "oil vendor" continues to accept only the established tokens, keeping the stadium's currency dominant.
